Amrutha Kanchupalli

DevOps Engineer | Azure & Cloud Operations| CI/CD Automation

8688007826 | amruthakanchupalli123@gmail.com | Hyderabad | Linkedin

PROFILE SUMMARY

Innovative DevOps Engineer specializing in **application testing, deployment validation, and production support**. Experienced in **CI/CD pipeline testing, Azure cloud infrastructure monitoring, Linux operations, and release validation**, supporting stable and reliable software releases. Proficient in monitoring **Azure resources,** including virtual machines, storage, and networking components, performing Linux-based operational checks, and validating deployments with **99.9% release stability**. Collaborated with cross-functional teams to identify deployment issues early, contributing to a **30–40% reduction in post-release incidents** and improved overall release confidence.

SKILLS

Professional Skills: CI/CD Release Validation | Deployment Testing | Cloud Operations Support | Incident Monitoring & Troubleshooting | Technical Documentation | Time Management | Team Collaboration

Technical Skills: Azure DevOps | Microsoft Azure | Linux | Docker | Kubernetes | Terraform | PowerShell | Bash MS Office | Python | Git

WORK EXPERIENCE

Tally Group, Hyderabad
Junior DevOps Engineer | July 2024 – Dec 2025

- Performed application testing and deployment validation for releases executed through Azure DevOps pipelines, helping achieve ~30% faster release sign-offs.
- Monitored and validated **Azure cloud resources**, including virtual machines, storage, and network components, ensuring environment stability post-deployment.
- Supported **CI/CD pipeline executions** by verifying build artifacts, environment readiness, and deployment status across test and production environments
- Conducted **smoke and regression testing** after deployments, reducing post-release issues by **25%**.
- Worked with **Dockerized applications**, validating container health, logs, and configuration consistency across environments.
- Assisted in **Kubernetes deployment verification**, checking pod status, services, and rollout health to ensure zero critical failures during releases.
- Used **Terraform outputs and plans** to validate infrastructure changes and confirm successful resource provisioning.
- Performed **Linux and Windows operational checks**, including service status, log analysis, and system health verification.
- Automated routine operational checks using **PowerShell, Bash, and Python**, reducing manual validation effort by **20–25%**.
- Actively supported **production monitoring and incident handling**, performing first-level troubleshooting and escalating issues with detailed logs and impact analysis.
- Maintained deployment and testing documentation, improving release consistency and team handover efficiency.

PROJECTS

- **Image Dehazing Application Using Deep Learning**
  Developed a deep learning–based application to **reduce the effects of atmospheric haze and fog** from degraded images. Applied convolutional neural network (CNN) techniques to enhance image visibility and restore scene details. Performed image preprocessing and evaluated dehazed outputs to improve clarity and contrast, demonstrating applicability in computer vision and image enhancement systems.
- **CI/CD Pipeline Automation Using Azure DevOps**
  Implemented an end-to-end CI/CD pipeline using **Azure DevOps** to automate build, test, and deployment workflows. Integrated source control, automated builds, and deployment validation steps to ensure consistent releases. Improved deployment reliability and reduced manual intervention during releases.
  Technologies: Azure DevOps, Git, Linux, Bash.
- **Containerized Application Deployment**
  Containerized a sample web application using **Docker** to ensure environment consistency across development and testing. Deployed the application on **Kubernetes**, verified pod health, services, and rollout status. Monitored container logs and validated deployments for stability.
  Technologies: Docker, Kubernetes, Linux.

- **Infrastructure Provisioning Using Terraform**
  Provisioned cloud infrastructure using Terraform, including virtual machines, networking, and storage components. Validated infrastructure changes using Terraform plan and apply workflows. Ensured repeatable and version-controlled infrastructure deployments.
  Technologies: Terraform, Azure, Linux.
- **Learning Management System – DevOps Deployment**
  Deployed a Learning Management System using **CI/CD pipelines**, containerization, and cloud services. Integrated build automation, deployment verification, and monitoring to ensure application availability. Validated application performance and stability post-deployment.
  Technologies: Azure, Azure DevOps, Docker, Kubernetes, Linux.

EDUCATION

B.Tech – Electronic and Communication Engineering
Raghu Engineering College, Visakhapatnam – 2023
