EXPERIENCE

Cognizant, Chennai — Software Engineer

Jan 2019 - Dec 2022

TCS, Hyderabad — IT Analyst

Jan 2023 - Till date

- Having a total of **7 years 2 months** of experience in the industry as a Full Stack Engineer.
- Technology enthusiastic with the ability to work independently and efficiently towards achieving organization as well as individual goals.
- Very much interested in learning new technologies.
- Comprehensive experience in development projects, code standard, designing proposals, Project planning and flow of project execution as well as tracking of the code along with the quality, maintenance & review.

EDUCATION

Maharaj Vijayaram Gajapathi Raj College Of Engineering, Vizianagaram — B.Tech with 73.40%

Sep 2014 - April 2018

Sri Chaitanya Junior College, visakhapatnam — Intermediate with 86.90%

Mar 2012 - April 2014

Oxford Talent School, visakhapatnam — SSC with 8.8/10 (CGPA)

Mar 2011 - April 2012

ACHIEVEMENTS:

- Participated in internal company innovations for insurance based applications using VR and AR for improving the customer surveys and shortlist for top 5.
- Digital Engineering Award by Team.
- Built Custom components of spellchecker for the customer to ease of use in one of the applications and got appreciation for that.
- Worked on the challenging implementation of Polybase in the SQL server side for one of our applications which helped customers to improve security wise like eliminating username and password for connection in onprem servers.

Technical Skills:

Primary Skills:

React Js, java, Spring Boot, vue js, HTML, CSS, Microsoft copilot studio, Power apps, workflows etc.

Secondary Skills:

Nuxt Js, Python, restful Web services, javascript, AWS lambda, Dot net (basics), Azure services(pipelines, web services, storage account, app insights, etc.), Polybase implementations with sql servers, Azure devops.

Securities:

Worked on Okta configurations with respect to Vue js.

Databases : MySQL, MongoDB.

Tools : STS, Robo 3t, Git Bash, Eclipse, Visual studio code.

LANGUAGES

English, Hindi, Telugu.

PROJECTS

ESS Agent:

Employee Self service (AI related project) is a self service which is one of the M365 copilot agents which will help the employees on their queries in simple response based on the queries to reduce human efforts to checking the with respected applications to get the details we will get at single place with functionalities like case creations, uploading files, getting holiday details of each employee based on the regions, etc.

Technologies used are Microsoft copilot studio, Flows, M365, topics, knowledge sources, dotnet, azure resources, pipelines, web services, storage accounts, etc.

PDM Integration:

Dashboard Application: is a self service web application which helps the FTE engineers to work on different functionalities like Data sync monitor, health sync monitor, process monitor, etc. to provide data from azure services with technologies used are React js, redux with Typescript, etc.

Disability Application: In this user can provide their consent on the disability status in the portal to stay up to date with the employee central application which is an internal other application.

For these two applications we have used Azure resources like function apps, pipelines, web services, storage accounts, etc.

Technologies used are React js, redux with Typescript, dotnet.

Headtrax

Headtrax is a self service thick and thin client application which supports the users to know the v-alias creation status and other updates from SAP team to know user details in it which helps the FTE or vendors to know their v-alias request and current status of employee profiles generated, etc.

Technologies used are SQL Server, polybase, dotnet, Azure services like managed identities, On premise server, windows services, ICM resolutions, etc.

E-360 (NCU)

Network OS Code upgrade(NCU) is a self service web application which helps the lead engineers to work on different personas having the functionalities like below

Admin: admins can change the freezing window time and threshold time limits for the scheduling devices, etc.

ITM Services: we can perform some operations like approvals and workflow items.

Engineering Activity: We can schedule and perform workflows on Activities and Basic functionalities like creating Activities, schedule devices basing on their service lines for selected devices

Technologies used are React js, redux with Typescript, dotnet, Azure services like logic apps, sql servers, sql database, etc.

CMOS

Corporate Markets Operating System is a centralized self service platform which helps the user to Maintain the Centralized Data transferring using multiple maintenance screens (like fund master, etc.).

CMOS is used to perform fund transactions related to the policies like subscription, redemption, reallocation, death claims in take with workflow functionality (approve, reject, cancel, etc.) for funds.

Policy search will help users to update their policy holder details with workflow functionalities (approve, reject, cancel, etc.).

Technologies used in CMOS web applications are React js, spring boot, etc.

Agent Desktop

Agent Desktop is a website where users can see the policies list and its details and its associated policies along with alerts and documents related to the particular policies, billing details etc.

In Agent Desktop we have a Message Center section as well where the user can see his/her messages list and on that particular message user can reply as well for any query which will interact with 2 external applications (AWD, e-service) and create messaging queues and handle requests.

We have developed a separate module of spell checker which would be helpful to send proper messages in a more smart way. It can detect wrong words and show suggestions of correct words. User can select the correct word and move forward to submit his query.

Technologies used in Web Application are VueJs, Python, AWS Lambda, AWS Cloud watch, etc.

GSSP Chile & GSSP Sales EMEA

GSSP Chile is a digital application for insurance to the different products in it using GSSP Composer, Robo 3t, mongoDB, ejs and handlebars templates, and generating dynamic PDF in Web and Mobile Application.

PLACE: Hyderabad

DATE: 10th May 2026.
